Working towards great version control for content creators

Hi.

A screenshot paints a thousand words.

Usersnap is the most efficient feedback tool for your Website.

Usersnap

Get screenshots directly form your readers, customers and users. Usersnap helps you to get visual feedback easily.

Download Version 2.2

Description   Installation   FAQ   Screenshots   Changelog   Stats   Support   Reviews   Developers

Usersnap helps you to get feedback on your sites. You can create annotated screenshots without installing anything. A small snippet of code on the website creates a feedback button. Your users may highlight, blackout and use sticky notes to give visual feedback which is then sent to you! Usersnap is like the Google+ Feedback tool for your sites.

My ~~problem~~ challenge with WordPress and version control

I use private repo's on GitHub to store my WP-files. I wish I could do the same for my posts.

"

… despite how crucial GitHub is to the developer toolbox, I'm constantly wondering why the platform is limited to just code.

Loren Burton on how he's building GitHub for Writers

I don't want to build a GitHub
'for everyone else'.
I'm lazy.

"

… there can be multiple pull requests and multiple versions of the code floating around simultaneously, but everything eventually ends up in single place (master branch).

What I learned learning Rails / becoming a better teacher

Permalink: http://www.1stfloorgraphics.nl/fork/what-i-learned…better-teacher/   Edit

[Add Media] [Add Contact Form]   Visual | **Text**

[b] [i] [link] [b-quote] [del] [ins] [img] [ul] [ol] [li] [code] [more] [close tags] [proofread] [fullscreen]
Learn Rails they said. It's easy they said. I experienced learning Rails as everything but easy. It seemed that with every step I was slapped in the face with a new gem, exception or a whole new programming language. "You should really use JavaScript for that." ... and off I went to Codecademy to follow their JavaScript track. Even though I was surrounded by some great mentors, some days just looking at Avdi's Objects on Rails made my stomach cringe.

I'd like to share what I've learned, being confident with Rails after starting learning programming in the evening hours August last year. I'd like to offer you coders a different view on what is maybe too self-evident for you to adapt your vocabulary. Why would you coach at a Rails Girls event?

    Because it's awesome to help people
    Because teaching will accelerate your own learning. They will ask you things you'd otherwise take for granted. And you'll need to be able to actually explain it. I strongly believe teaching makes you a better programmer.

Hi. My name is Floor Drees. Two years ago I exchanged Rotterdam for Vienna to work at a startup that does 'stuff' with reviews and is **not** called Yelp. I had worked as a community manager for agencies and startups for 5 years, and here I'd make a little step up, becoming head of community management (notice the 'head of'? That addition is not there for swag reasons alone, I actually managed a team). Partly because I had been doing more or less the same thing over and over for years, ie community management, because I wanted to 'make stuff' again (I have a background in design) and because I worked closely together with the developers there, I decided I wanted to pick up on something new.

That something new was learning to program. As this startup's stack used Ruby on Rails, there was no real decision process here on what language I'd be learning. Cool thing is that many of my developer coworkers had coached at Rails Girls events, and I was familiar with their program. I started going though their courses, in August last year, supported by one of my coworkers. Little later my company supported me to work as a junior

Partly because I had been doing more or less the same thing over and over for years, ie community management, because I wanted to 'make stuff' again (I have a background in design) and because I worked closely together with the developers there, I decided I wanted to pick up on something new.

That something new was learning to program. As this startup's stack used Ruby on Rails, there was no real decision process here on what language I'd be learning. Cool thing is that many of my developer coworkers had coached at Rails Girls events, and I was familiar with their program. I started going though their courses, in August last year, supported by one of my coworkers. Little later my company supported me to work as a junior developer one day a week, mainly documenting bugs talking to marketing and communication, and actually fixing bugs.

I absolutely loved it, BUT... looking back on a year of learning I see things that could have been tackled better. Like:
<h3>Start with the basics</h3>
REALLY learning HTML, Markdown and CSS helps one to create a proper understanding of constructing decent syntax. Codecademy fucking rocks and so does Codeschool, so just send them on their way if frontend isn't necessarily your strong point.
<h3>JavaScript will continue to s*ck - be hard (better dig into it fast)</h3>
JavaScript is just hard, the syntax is weird and complicated and it doesn't 'read' like HTML or Ruby. It was also hard not be fooled by CoffeeScript's popularity and end up figuring out which failing CoffeeScript line corresponded with which JavaScript line.
<h3>Don't get started with Bootstrap till you have a decent understanding of CSS (inspect ALL the elements)</h3>

(...) enables qualified users to submit changes to currently published posts or pages. Contributors also gain the ability to submit revisions to their own published content.

pending revisions

scheduled revisions

enchanced revision management form

front-end preview display

new WordPress role: revisor

Features

This page enables **optional** adjustment of Revisionary's features. For most installations, the default settings are fine.

Role Definition

☑ Include capabilities for all custom post types in the WordPress Revisor role

☑ Prevent Revisors from editing other user's drafts

If checked, users lacking site-wide publishing capabilities will also be checked for the edit_others_drafts capability

Revisions

☑ Scheduled Revisions

If a currently published post or page is edited and a future date set, the change will not be applied until the selected date.

    ☑ Asynchronous Publishing

    Publish scheduled revisions asynchronously, via a secondary http request from the server. This is normally preferable as it eliminates delay, but some servers do not support it.

☑ Pending Revisions

Enable some users to submit a revision for an existing published post or page which they cannot otherwise edit. Contributors can submit revisions to their own published content, and users who have the edit_others_ capability (but not edit_published_) can submit revisions to other user's content.

These Pending Revisions are listed alongside regular pending content, but link to a Revisions management form. There the pending revision can be viewed, compared to other revisions, and approved or deleted by qualified editors. If the submitter set a future publish date, approval schedules delayed publication of the revised content.

☑ Prevent Revisors from editing others' revisions
☐ Strip html tags out of difference display

Email Notification

[By default ▾] Email Editors and Administrators when a Pending Revision is submitted

[By default ▾] Email original Author when a Pending Revision is submitted

☑ Email the original Author when a Pending Revision is approved
☑ Email the Revisor when a Pending Revision is approved

☑ Email Editors and Administrators when a Scheduled Revision is published
☑ Email the original Author when a Scheduled Revision is published
☑ Email the Revisor when a Scheduled Revision is published

Note: "by default" means Pending Revision creators can customize email notification recipients before submitting. For more flexibility in moderation and notification, install the Press Permit Role Scoper plugin.
